## **Activity Guide: Term 4**

**Sesotho | English**

The Grade R Mathematics and Language Improvement Project is an initiative of the **Gauteng Department of Education** and its key partner, the **Gauteng Education Development Trust**.

The development and production of the training and classroom resources for the Grade R Mathematics and Language Improvement Project were made possible by generous project funding from the **United States Agency for International Development** and the **Zenex Foundation**.

The Grade R Mathematics and Language Improvement Project is managed by **JET Education Services** with **UCT's Schools Development Unit** and **Wordworks** as technical partners.

The **Schools Development Unit** (SDU) at the **University of Cape Town** (UCT) is the mathematics technical partner to the Grade R Mathematics and Language Improvement Project. The SDU is a unit within UCT's School of Education that focuses on teachers' professional development in Mathematics, Science, Literacy/Language and Life Skills from Grade R to Grade 12. The SDU offers teacher qualifications and approved UCT short courses, school-based work, materials development and research to support teaching and learning in all South African contexts.

This edition of the mathematics materials has benefitted from collegial engagement with Wordworks colleagues and has been improved by their alignment with the materials of the Language Improvement Programme. It has been enriched by the work of officials of the Gauteng Department of Education's Early Childhood Development and Foundation Phase Curriculum Sub-Directorates at District and Provincial level who have made valuable contributions to the content of the materials and engaged constructively to ensure alignment with provincial policies, practices and values.

# Introduction

The Grade R Mathematics Improvement Programme (Grade R Maths) is based on a good knowledge of mathematics, an understanding of the progression in the Grade R curriculum, and a realisation that some teaching approaches are better suited to promote particular learning and outcomes.

The Grade R Maths *Activity Guide: Term 4* offers a structure for teaching maths in the fourth term of Grade R by:

- sequencing the content of each Mathematics Content Area across ten weeks
- providing progression and pacing within the five Content Areas
- focusing on one main Content Area per week (However, topics from other Content Areas may be introduced and practised during that week. Number-related learning and teaching takes place every day and is integrated into all the Content Areas.)
- suggesting activities for whole class, teacher-guided and independent group work.

## Features of Activity Guide: Term 4

The following features form part of *Activity Guide: Term 4*:

- A content overview shows the new knowledge and practice focus per week.
- Term, week and Content Area Focus are clearly stated at the beginning of each week.
- Topics, New knowledge and Practise boxes show what will be covered in the week.
- New maths vocabulary to be taught is listed per week.

Topics	New knowledge	Practise
• Properties of shapes	• Sort shapes according to size, colour and shape • Shape conservation	• Oral counting: forwards 0–20 and beyond, backwards 10–0 • Counting objects 1–10 • Shapes: circle, square, triangle, rectangle • Figure-ground perception
New maths vocabulary		
sharp	round	

- A list is given of what you need to prepare for each week.
- Tip boxes give ideas and reminders.
- Integration boxes suggest how the maths can be reinforced in other subjects and daily activities during the Grade R daily programme.
- ‘Check that learners are able to’ boxes guide observation and continuous assessment.
- A continuous assessment page is based on the term’s activities.
- Resources and templates are included at the back of the guide.

## Grade R Maths in the daily programme

Routine is important and learners enjoy the repetition and feel secure when they know what to do and what is expected of them.

Planning is also important to ensure that the routine runs smoothly. Read the contents for the week and prepare all the materials you will need for each day in advance. Set out the materials for the day beforehand so that everything is ready in the morning.

Grade R Maths suggests a sequence of activities that are repeated daily over a five-day week. Classroom organisation and activities that can be used to teach and reinforce maths concepts are suggested per week. These include:

## Whole class activities per day

- Rhyme or song
- Oral counting
- Counting concrete objects
- Activities and questions linked to Content Area topics

At the end of the whole class activity, show the learners what they will be required to do at their workstations. All the materials they need should be set out so that they can begin working on the activities.

## Transitions: moving between activities

Moving between the mat and the workstations is a great time to practise rhythmic counting and fun, creative ways to move, for example, slowly like tortoises, hopping like rabbits, quietly like mice, one by one with their name/picture symbol cards.

## Small group activities

- There is one teacher-guided activity per day.
- There are four small group activities per day. These four independent activities (or side activities) should be set out at four **workstations** around the classroom – either at tables where the learners are seated or stand, or on the mat, or outside. The groups rotate to each **workstation** over the course of a week, depending on how the teacher has planned the activities. Remind learners to take turns, share materials and help each other while working.

## Tidy-up time

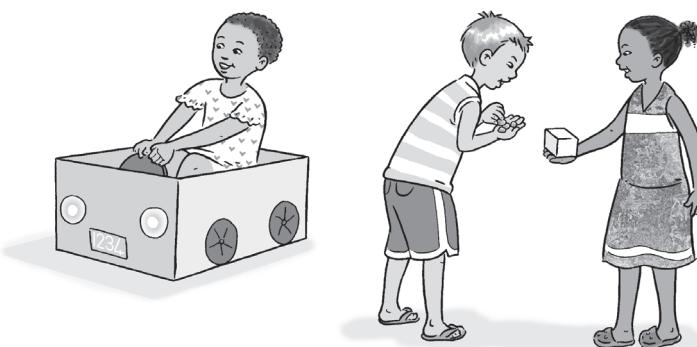

Learners need to know where materials belong. A shelf or table that is dedicated to maths equipment will help learners to be organised. Encourage learners to help each other during tidy-up time. Initially learners will need assistance and you will have to remind them where to put things, but they will soon get into the routine of putting things where they belong.

Choose group leaders and tidy-helpers each week. Give them specific tasks and responsibilities.

## Free choice activities

Set out creative, interesting activities that learners can choose from once they have completed their workstation activity. These could include:

- blocks or other construction toys
- puzzles
- playdough
- books in the reading corner
- fantasy play, for example, shopping
- workbook or worksheet pages.

## Diketsahalo tsa tlelase yohle ka letsatsi

- papadi ya boinahanelo, ho etsa mohlala, ho ya mabenkeleng
- buka ya mosebetsi kapa maqephe a dipampiri tsa mosebetsi.

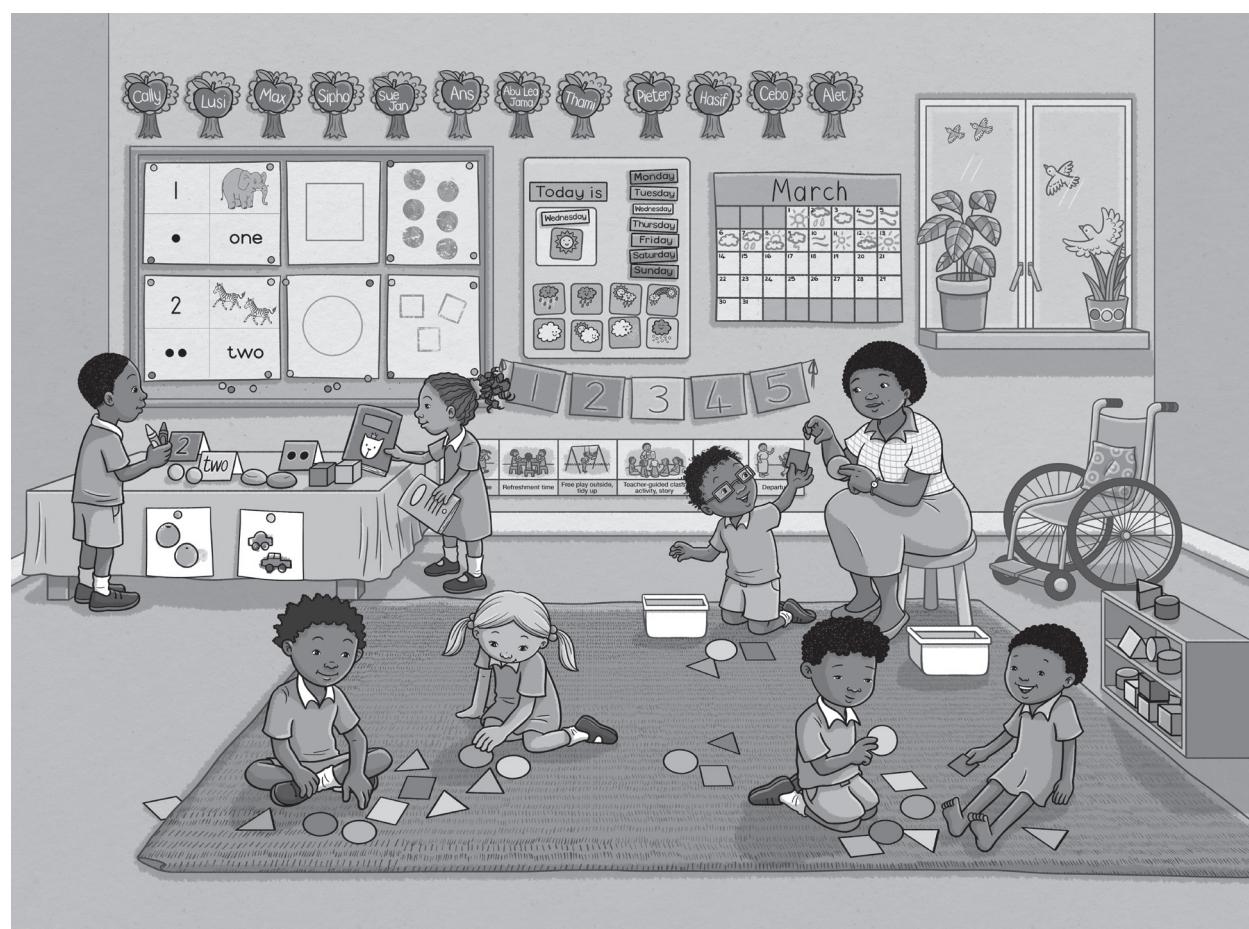

## Assessment

Observation and continuous assessment during teacher-guided and whole class activities provides opportunities for insights into and a good overview of each learner's progress. This information is important for guiding further teaching and interventions for individual learners. The continuous assessment checklist on pages 184 and 186 of this guide is based on the content that has been taught in Term 4. This template can be used to record each learner's progress during the term.

## Grade R Maths in the classroom

Set up an area in the classroom that is dedicated to maths and is near the mat. This is a shared space where learners can contribute to and engage with the topic they are learning about. An ideal maths area will include:

- small table against a wall
- number line made with string and pegs
- daily weather chart
- calendar for each month with blocks for each day
- chart with the names of the days of the week
- daily programme with pictures for the different activities
- learners' name cards and symbols arranged according to their group names
- helpers' symbols to move between learners' names according to each day of the week
- helpers' chart.

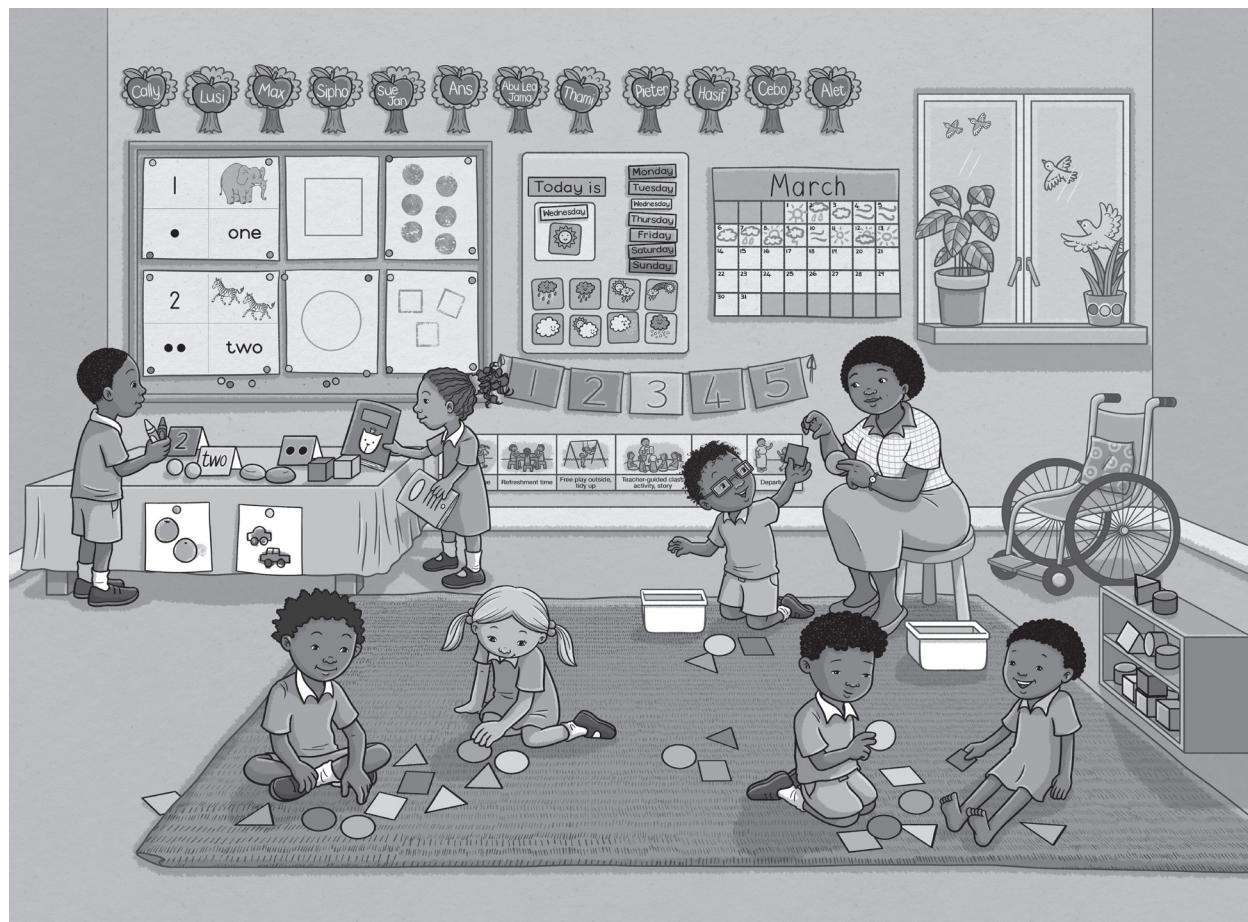

## Tekanyetso

Kelohloko le tekanyetso e tswellang nakong ya diketsahalo tse tataiswang ke titjhere le tsa tlelase yohle e fana ka menyetla bakeng sa kutlwiso ya tjhebokakaretso ya kgatelopele ya moithuti ka mong. - matshwao a bathusi a tsamayang pakeng tsa mabitso a baithuti ho ya ka letsatsi ka leng la beke
- tjhate ya bathusi.

Make a 'classroom rules' poster with the learners. Display it where they can easily see it. There should be no more than six or seven rules.

## Resources for Grade R Maths

### Grade R Maths Resource Kit

Grade R Maths provides a kit for learning and teaching maths that provides apparatus for a small group of six to eight learners to use. The kit includes the following items:

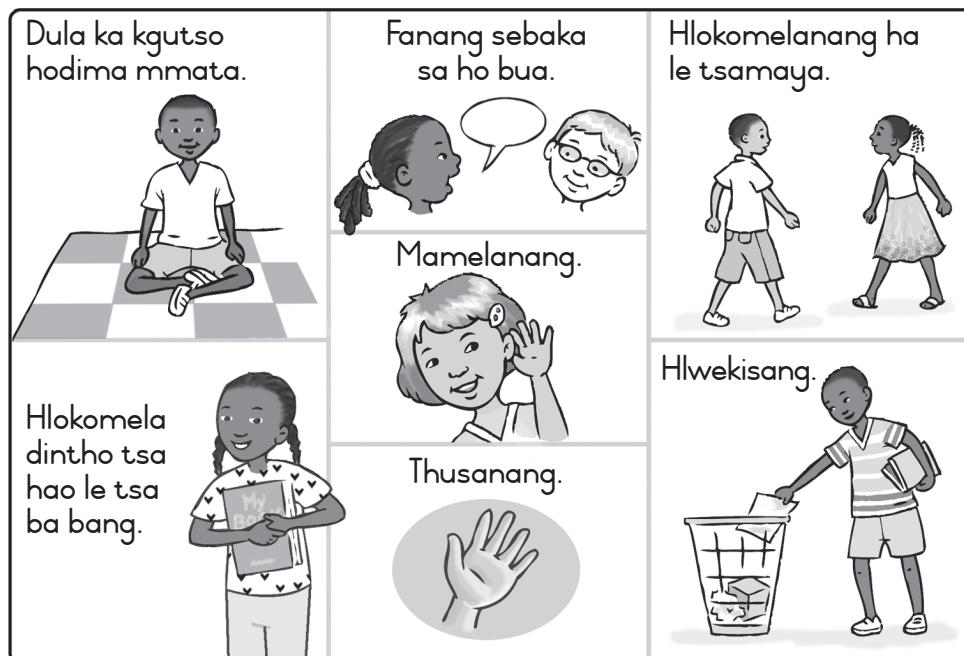

- counting materials, for example, coloured discs and sticks, fruit and animal counters, Unifix blocks
- jumbo dice
- strings of ten structure beads
- dot cards
- number cards: number symbols (0–10) and number words (zero–ten)
- attribute blocks.

These should not be the only resources that teachers and learners use during maths activities. Everyday objects from home are ideal for sorting, counting and exploring shapes.

Etsa phoustara ya 'melawana ya phaposi ya borutelo' mmoho le baithuti. E manehe moo ba ka e bonang ha bobebe. Ho se be le melawana e ka hodimo ho e tsheletseng kapa e supileng.

## Recycled materials

Store recycled materials in labelled containers with lids (such as: fruit and vegetable packaging, 2-litre ice-cream containers and 500-ml feta tubs). Place the containers on a shelf or somewhere that the learners can reach. Encourage learners to put the objects away during tidy-up time if they have used them at their workstations or during free choice activities. Here are some ideas for maths resources:

- bottle caps and lids (different shapes, sizes and colours)
- different-sized boxes (toothpaste, matchbox, cereal, medicine, packaging)
- plastic containers (500-ml and 1-litre bottles, margarine tubs, 250-ml and 500-ml yoghurt tubs, ice-cream containers, vegetable packaging)
- tubes and cylinders (cardboard toilet roll inners, paper towel inners, foil roll inners, tins)
- egg boxes
- buttons, old keys, plastic spoons, ice-cream sticks, bread packet tags
- variety of balls, beanbags, hula hoops.

## Other resources

Other useful classroom resources for Grade R Maths teaching include:

- crayons, paint, glue, scissors
- playdough or modelling clay
- books that can be used for maths discussions
- building blocks and construction toys (collect wood offcuts if necessary)
- a variety of jigsaw puzzles and games, for example, dominoes, snakes and ladders, Ludo, Lotto

## The Grade R Maths Poster Book

There are eleven posters in the Grade R Maths *Poster Book*. The posters present familiar contexts that learners can relate to that capture some aspect of maths, for example, in the classroom, on the playground, and in the kitchen. The posters are intended to stimulate interest and discussion on maths topics, including: number, patterns, space and shape, sequencing of time and measurement. The posters can be used to engage learners in critical thinking and reasoning. They are perfect for developing problem-solving skills and for maths investigations.

Teachers can encourage learners to discuss the posters and share their thinking by asking questions to guide them in focusing on a particular aspect of the poster, for example:

- What do you see in the picture?
- Where do you think the children/people are?
- What is happening in the picture?
- Can you tell me a story about the picture?
- How many ... can you see? What if there was one more/fewer ...?
- Where is the ...?
- What would happen if ...?
- What do you think will happen next?
- What do you think ... can see from where they are standing?
- What pattern can you see? Describe the pattern.
- What shapes can you see?
- Which ... is the tallest/shortest?
- Can you use any maths words to describe something in the picture?

## Whole class activities

### Day 1

#### What you need

- Number friezes 1–8
- Number frieze and house template for number 9 (page 204)
- *Number 9 story* (page 188)

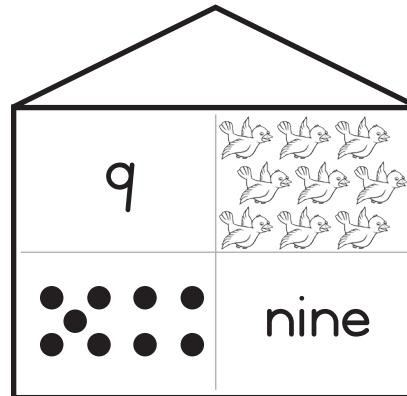

**TIP**  
Remember to talk about the daily programme.  
Remember to do the calendar, days of the week, months of the year and birthday chart each day.

1. **Song/rhyme:** Learners sing a song or say a rhyme of their choice from previous terms.
2. **Oral counting:** 1–20 and beyond, 10–1.
3. **Counting objects 1–10:** Learners put their hands behind their backs. Call out a number. Learners hold up the correct number of fingers to represent the number.
4. **Introducing number 9:** Point to number friezes 1–8.

#### Guiding questions:

- ★ How many animals do you think will live in the next house?
- ★ Will there be more or fewer than eight?

Tell the *Number 9 story*. Show the parts of the number frieze as you build up the story of the birds and images of the house: the different representations of number 9 – the picture, the dots, the symbol and the word. Display the parts of the frieze in the animal house next to the number 8 on the wall in the maths area. Count the birds together. Learners practise the number 9 by writing it in the air or on the mat with their fingers.

- ★ How many birds can you count?
  - ★ How many wings/beaks/legs does each bird have?
  - ★ How many more birds are there than mice/monkeys, and so on?
- Learners dramatise the story.
- ★ How did the birds fly?
  - ★ What did they do when they got to the house?
  - ★ Can you show how they slept that first night?

5. **Small group activities:** Describe the activities at each workstation. Workstation 4 is a board game using a dice. Show learners how to throw the dice and move their animal counters the corresponding number of spaces on the board.

Demonstrate how to play board games to make sure learners understand the rules of each game.

Each group says what they have found and how many they have found. Give each group a number 9 dot, symbol or word card. One group at a time puts their objects and number 9 card on the maths table.  
Learners clap, jump, hop and step forward and backwards nine times.
  5. **Small group activities:** Describe the activities at each workstation.

## Day 3

## What you need

- Rhyme: *Two little chickens* (page 188)
- Dot cards 1–9 (*Resource Kit*)

1. **Rhyme:** Say the rhyme, *Two little chickens*.

**TIP** Find or make up other songs or rhymes with a similar theme so that you include songs and rhymes in all the learners' home languages. For example, create rap songs to a musical beat.

2. **Oral counting:** 1–20 and beyond, 10–1.
3. **Counting objects 1–10:** Five learners stand in front of the class in a line and hold out their hands. Together count their hands in twos as you touch each of the five learners' hands, i.e. two hands, four hands, six hands, and so on. Repeat asking learners to count 2, 4, 6, 8, 10 as you touch their hands. Repeat with other groups of five learners counting ears, eyes, feet, legs, elbows, and so on.
4. **Dot cards and ordering 1–9:** Learners sit in a circle. Show them the dot cards 1–9 individually. They call out the number of dots on each card. Hold the cards up so that learners can see them.

### Day 1

#### What you need

- Song: *Ten little honey bees* (page 190)
- Chalk
- Number friezes 1–9
- Number frieze and house template for number 10 (page 206)
- *Number 10 story* (page 190)

1. **Song:** Sing the song, *Ten little honey bees*.
2. **Oral counting:** 1–20 and beyond, 10–1.
3. **Counting objects 1–10:** Draw 10 flower shapes on the floor. Play music and learners buzz around the room like bees. When the music stops, call out a number from 1 to 10. Learners group themselves like bees on a flower according to the number called out. The learners who are not able to join a group on a flower are out. Repeat.

#### Guiding questions:

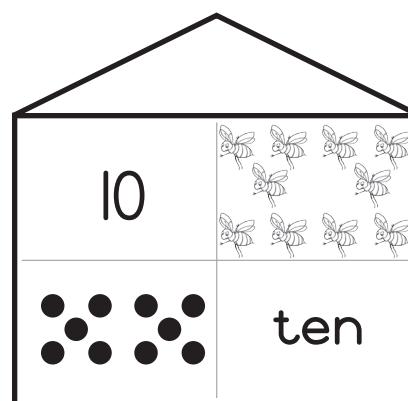

- ★ How many flowers are there?
- ★ How many bees on this flower?
- ★ How many bees don't have a flower?

4. **Introducing number 10:** Point to number friezes 1–9.

#### Guiding questions:

- ★ How many animals do you think will live in the next house? Why do you think that?
- ★ Will there be more or fewer than nine?

Tell the *Number 10 story*. Show the parts of the number frieze as you build up the story of the bees and images of the house, and the different representations of number 10 – the picture, the dots, the symbol and the word. Display the parts of the frieze in the house on the wall in the maths area. Count the bees together.

1. **Song:** Sing the song, *Ten little honey bees*.

2. **Oral counting:** 1–20 and beyond, 10–1.

3. **Counting objects 1–10:**

Display the bees on the wall. Learners estimate how many there are. Count together as you place one bee at a time into the beehive.

**Guiding questions:**

- ★ Can you show me with your fingers how many bees are in the hive?

4. **Adding and subtracting:** Take two bees out of the box.

**Guiding questions:**

- ★ How many bees flew out of the hive?
- ★ Can you show me with your fingers how many bees you think are left in the hive now?

Show learners the bees left inside the box and count together to check if they are correct.

Add two bees to the hive.

- ★ How many bees do you think there are in the hive now?

Show learners the bees left inside the box. Count together to check if they are correct. Repeat.

5. **Maths table:** Three groups of learners collect 10 similar objects outside. Each group says what the objects are and how many they found. Give each group a number 10 dot, symbol or word card. One group at a time puts their objects and the number 10 cards on the maths table.

Let learners estimate the number of objects there are in a group of objects before they count them, and then check their estimates. This helps them to develop a sense of the 'size' of the numbers they are counting.

1. **Song:** Sing the song, *Ten little honey bees*.
2. **Oral counting:** 1–20 and beyond, 10–1.
3. **Counting objects 1–10:** Place the 10 bee cut-outs on the wall. Eight learners stand.

#### Guiding questions:

- ★ Is there a bee for each learner?
- ★ How many more learners do we need so that each learner has a bee?

4. **Combinations to 10; more/fewer:** Choose two pairs of learners. A learner from each pair chooses a dot card. Everyone counts together. A learner from each pair fetches the same number of bees as dots on the card from the hive. Together count the total number of bees collected by the two learners. Repeat with other learners.

#### Guiding questions:

- ★ How many dots are there? How many bees must you fetch?
- ★ How many dots/bees are there altogether?
- ★ Look at the bees. How many more bees does \_\_\_\_\_ have than \_\_\_\_\_?

5. **Practising dot, symbol, number word cards:** Place dot cards where learners can see them, for example, on the wall. Learners take turns to choose two cards that make up the number as directed.

#### Guiding questions:

- ★ Can you show me two cards that make up the number 10/8/4/3?
- Learners take turns to match the dot cards to the number symbol and number word cards on the frieze.

### TIP

Remember to take off the coloured pegs after the session in preparation for the next group.

2. **Counting in twos:** Count in twos on the number washing line.

Replace the pegs with coloured pegs on each count, for example, on 2, 4, 6, 8 and 10.

3. **Groups of 10:** Tell the story, *The beehives*.

Learners work in pairs. Each pair gets 50 counters (bees) and 5 lids (beehives). They put their 'bees' (counters) in groups of 10 into their 'beehives' (lids).

#### Guiding questions:

- ★ How many beehives do you have?
- ★ How many bees are there in each beehive?

4. **Structure beads:** Learners use structure beads to count.

### TIP

Structure beads help learners to understand that one number may be made up of a combination of two or more numbers.

#### Guiding questions:

- ★ Show me nine beads. Now show me six beads. How many fewer beads is this than 9?
- ★ Show me five beads. Let's make 10 beads. How many more beads do you need?
- ★ Hold five beads in your hand. Add another three beads. How many beads do you have?
- ★ Hold seven beads in your hand. Now show me 10 beads. In order to have 10, how many more did you need to add?
- ★ Hold 10 beads in your hand. To have four beads, how many do you need to take away?

5. **Number track towers:** Place the number tracks and Unifix blocks on the mat. Learners take turns to say the number and place a tower built from the correct number of Unifix blocks on each square.

#### Guiding questions:

- ★ How many Unifix blocks did you use for the tower on that number square?
- ★ Which tower has more/fewer blocks?
- ★ How many more/fewer blocks does number 3 have than number 4, and so on?
- ★ Which number is the biggest/smallest? How do you know?

6. **Practising number 10 using playdough:** Learners make the number symbol 10 out of playdough. Support learners who are ready to write 10.

#### Check that learners are able to:

- solve addition and subtraction problems that involve numbers 1–10
- count in twos
- make and describe different pairs of numbers that combine to make a number
- match number symbols and Unifix blocks

### Workstation 1

#### What you need

- Playdough
- Playdough template: Number 10 (page 212) – 1 per learner

Learners use playdough to complete the template.

**TIP**  
When you ask learners to explain how to play a game, it will give you insight into whether they understand the rules.

### Workstation 2

#### What you need

- Per learner:
- Farmyard race game board (page 216)
  - Dice
  - Animal counter

Learners throw their dice and move their animal counter on the board the number of spaces shown on the dice. They continue in this way until they reach the haystack. They need to throw the exact number to land on the haystack to finish the game. If they don't, they continue to throw until they throw the exact number needed.

Learners dramatise the story. Use an empty cardboard box to represent the empty house. Choose learners to play the parts of the elephant, giraffes, birds and other animals.

Learners practise the number 0 by writing it in the air or on the mat with their fingers.

5. **Adding 0 to the number washing line:** Show learners the 0 number card. Ask where they think this should go on the number washing line. Ask a learner to come and put this on the number washing line.

#### Guiding questions:

- ★ Why did you put the number zero there?
- ★ What number comes after zero?
- ★ Who can fetch me zero books?

6. **Small group activities:** Describe the activities at each workstation.

Use the word 'zero' often when referring to the symbol '0' and use 'nought' during the day when talking about 'nothing' or 'no objects'.

Learners can use counters or their fingers to represent the bees. This helps them to prepare to work with problems at an abstract level.

1. **Word problems:** Learners place their tubs in front of them and count out 10 counters.

#### Guiding questions:

- ★ There are three bees on a blue flower and six bees on a red flower. How many bees are there altogether?
- ★ Two of the bees on the blue flower went back to the hive. How many bees are on the blue flower now?
- ★ Three bees from the red flower flew back to the hive. How many bees are on the red flower now?

2. **Counting objects:** Learners watch as you place five counters in one hand and four counters in the other hand. Show them your closed hands and say, 'I have five counters in this hand and four counters in my other hand.'

#### Guiding questions:

- ★ How many counters do you think I have altogether?
- ★ (Open one hand. Learners count the counters in that hand.) How many counters are there?
- ★ (Open the other hand. Learners count the counters in that hand.) How many counters are there?
- ★ How many counters are there altogether?

Repeat using other combinations up to 10, including one empty hand.

Include examples of adding to and subtracting zero, for example: 'Place zero counters on top of your tub.'

### 3. Matching an empty set with 0 symbol and word cards:

**and word cards:** Put 1–10 counters in some of the egg carton cups, leaving a few cups empty. Learners place the 0 number symbol and number word next to the cups that are empty.

#### Guiding questions:

- ★ Which cup do you think has the most/least counters? Why do you think that?
- ★ Which cups are empty? How many counters are in those cups?
- ★ How many empty cups are there altogether?

### 4. Addition and subtraction:

Learners place their counters on the mat and turn their tubs upside down. They place five counters under their tub.

#### Guiding questions:

- ★ How many counters are under your tub?
- Learners take two counters from under their tubs and place them on top of their tubs.
- ★ Now how many counters are under your tub? How many are on top? How many are there altogether?

Repeat using different combinations to 10.

Learners place all their counters on top of their tubs.

- ★ How many counters are under your tub? (None)

### 5. Number track towers:

Place the number track and Unifix blocks on the mat. Learners take turns to say the number on each square of the track and to place a tower built from the correct number of Unifix blocks on the square.

#### Guiding questions:

- ★ How many Unifix blocks did you use for the tower on that number square?
- ★ Which group has more/fewer blocks?
- ★ How many blocks are on the zero?

### 6. Practising number 0 using playdough:

Learners make the number symbol 0 out of playdough. Support learners who are ready to write 0.

#### Check that learners are able to:

- count groups of objects 1–10
- orally solve problems with numbers 0–10
- break down and build up numbers 0–10
- compare numbers in the range of 0–10
- recognise, match and name number symbols and number words for zero

## Workstation 1

### What you need

- Playdough
- Playdough template: Number 0 (page 214) – 1 per learner

Learners use playdough to complete the template. They create baskets, boxes, nests, and so on, with nothing inside.

## Workstation 2

### What you need

- 1 ice tray
- 200 coloured counters (Resource Kit)
- Dice with the 6-dot side covered with a sticker and replaced with '0'

The first learner rolls the dice and places that number of counters in one of the ice-tray compartments. The next learner does the same, placing that number of counters in the next compartment. Repeat.

## Workstation 3

### What you need

- A tub with 10 fruit counters – 1 per learner
- Dice

Learners place their counters in a row. They take turns to roll the dice and subtract from their row the same number of counters as shown on the dice and place them in their tubs. The first learner to place all their counters in their tub wins.

## Workstation 4

### What you need

- 6 tennis balls
- Ramp (for example, a wide plank)
- 4 tubs covered in different coloured paper

Place the ramp at a raised angle of about 20 cm from the floor. Place the tubs on the floor at the high end of the ramp. Learners take turns to roll their balls up the ramp and try to land their balls in the tubs. They count the total number of balls that landed in the tubs.

## Whole class activities

### Day 1

#### What you need

- Rhyme: *It's pattern time* (Activity Guide: Term 3, page 190)
  - Green, red and yellow
  - Green, red, yellow and blue
- Small table/box
- 3 pattern cards:

  - Green and red
  - Green, red and yellow
  - Green, red, yellow and blue

- 1 red, green, blue and yellow counting stick per learner

1. **Rhyme:** Say the rhyme, *It's pattern time*, with actions.
2. **Oral counting:** 0–20 and beyond, 10–0.
3. **Counting objects 1–10:** Place 10 green, 5 red, 2 blue and 10 yellow counting sticks in separate piles on a small table or box so that all the learners can see them.

#### Guiding questions:

- ★ How many green/red/blue/yellow sticks do you think there are?
  - ★ Which colours are there 0 sticks of?
- Choose a learner to count and hold each pile as the class counts together.
- ★ How many sticks are left on the table/box?

4. **Extending patterns:**

Learners sit in a circle. Place 30 green and 30 red sticks in the middle of the mat. Each learner takes one green stick and one red stick. Show a pattern card with the two colours. One learner starts by placing the correct colour stick on the mat. Learners take turns to continue the pattern until everyone has had a turn – the pattern will continue around the circle of learners.

#### Guiding questions:

- ★ Who can tell me what the pattern is?
- ★ What colour stick will come next in this pattern?
- ★ What colour should we add next to extend the pattern?

Give each learner a yellow stick. Show a pattern card with three colours and repeat the activity.

- ★ Can you make a pattern with three colours?

Give each learner a blue stick and repeat with four colours.

5. **Small group activities:** Describe the activities at each workstation.

If learners have mastered these pattern skills, extend the activity using two attributes, such as colour and shape or size.

- Song: *Clap, snap and stamp* (page 194)

1. **Song:** Sing the song, *Clap, snap and stamp* with the following pattern: clap, snap fingers, stamp foot; clap, snap fingers, stamp foot, and so on.
2. **Oral counting:** 0–20 and beyond, 10–0.

**TIP** When counting beyond 20, help learners understand that the numbers follow the same pattern as before. Remember that some learners may need more practice than others.

3. **Counting objects 1–10:** Learners stand in a line. They stamp their feet as they count from 1–10 and put their arms up in the air when they get to 10. They change directions and repeat the activity with another body movement, for example, clapping hands.
4. **Copying and extending sound patterns:** Learners stand in a circle. Create a pattern from the song, *Clap, snap and stamp*: Clap, clap, snap fingers, snap fingers, stamp foot, stamp foot (AABBCC). Learners each have a turn to repeat the pattern until everyone has had a turn.

## Guiding questions:

- ★ What should come first/next in this pattern?
- Repeat with an ABC movement, for example, jump, step to the right and turn around; jump, step to the right and turn around.
- ★ Can you copy these movements with your body?
  - ★ Can you see a pattern? What is the pattern?
  - ★ What is the pattern sequence?
  - ★ How can you extend this pattern?

Repeat with an ABAB pattern with actions, for example, hop, stand with legs astride; hop, stand with legs astride.

5. **Small group activities:** Describe the activities at each workstation.

## TIP

Help learners to explain the rule for the patterns they are copying or creating. This helps to develop their thinking skills.

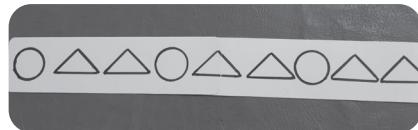

- Identify the pattern rule: One learner creates his/her own sound pattern, for example, clap, clap, snap fingers, snap fingers; clap, clap, snap fingers, snap fingers. Other learners say what the pattern is and repeat it.

In pairs, learners create their own sound patterns. One learner makes up a sound pattern and the partner explains what the pattern is and repeats it. Then they reverse roles.

### Guiding questions:

- \* What can you tell me about the pattern?
- \* Can you make a pattern like this?

- Geometric patterns: Draw a shape pattern on the board or a strip of paper, for example, circle, triangle, triangle; circle, triangle, triangle. Make at least three repetitions of the pattern.

### Guiding questions:

- \* What can you tell me about this pattern?

## Workstation 1

### What you need

- Playdough
- Playdough boards

Learners use the playdough to create an object, for example, nest, box, basket, house, car, bag and then one or more other objects to go inside, outside, next to, under, on top of the first object. They tell each other a story about the objects they have made using 'position' vocabulary.

Learners put the containers in order from those that can hold the least to those that can hold the most amount of water (smallest to largest capacity).

**TIP**  
Ask questions to make sure learners understand that the bucket can hold more than the cups or jugs so they would not need as many bucketfuls for the same amount of water.

Your selection of containers must clearly show which holds more/less water.

- ★ Which container do you think will hold more/less water?
- ★ How can we find out?
- ★ Can you put the containers in order of size? Which will come first/second, and so on?

5. **Small group activities:** Describe the activities at each workstation.

**Guiding questions:**

- ★ Do you think the blue cup will hold more/less/the same amount as the red cup?
- ★ How can we test this?

Encourage the learners to come up with ideas to test their suggestions.

One learner fills the smaller (red) cup with water and pours the contents into the larger (blue) cup.

- ★ What did you all notice?
- ★ How many red cups did \_\_\_\_\_ use to fill the blue cup?
- ★ Can \_\_\_\_\_ pour all the water from the blue cup into the red cup? What will happen?

Another learner fills the larger (blue) cup and pours the contents into the smaller (red) cup.

- ★ What does it mean if all the water in the blue cup won't fit into the red cup?
- ★ How did we test which cup holds more/less?

Repeat the Day 2 activity with three stations. Groups explore how to fill and pour water from one container to another.

5. **Small group activities:** Describe the activities at each workstation.

**TIP**

Make sure learners fill the containers to the top. You can use sand instead of water. If you are using water, ask learners what the water could be used for afterwards so that it is not wasted.

**TIP**

Some learners will count 'how many' cups/spoons, and so on, it takes to fill each of the containers. This links with Numbers, Operations and Relationships.

**Guiding questions:**

- ★ Which cup would you fill with water?
- Remove the small cup and replace it with the third cup.
- ★ Which cup do you think holds more/less water?
- ★ How can we find out?

Learners take turns to try to solve the problem, for example, by pouring water from the two cups into a third cup and comparing the results.

- ★ Which cup holds more?
- ★ How do you know?

Give each learner a cup and a food container. Use the sand.

- ★ How many cups of sand do you think it will take to fill your container?

Learners count the number of times they fill their cups and pour sand into their containers until they are full. They write the number on a piece of paper.

- ★ How many cups of sand did it take to fill your container?
- ★ Was it more than or less than you estimated?

**Check that learners are able to:**

- orally solve problems with numbers 0–10
- order collections of objects from smallest to biggest up to 10
- measure quantities to find out which container has the larger capacity and volume
- use words like more than, less than, empty, full, fill

### Workstation 1

Learners benefit from doing activities at different levels. This can be done on the floor or standing at a table.

### What you need

- Large containers – 1 per learner
- A variety of smaller containers, for example, yoghurt cups, spoons, plastic tubs
- Paper and crayons
- Sand

Learners choose a container and count the number of times they fill it with sand to fill the large container. They draw a picture of their container and write the number symbol to represent the number of non-standard measuring units used. Repeat with different containers.

## Workstation 3

### What you need

- Variety of smaller containers
- Bucket of water
- Funnels for pouring

Learners estimate where the level of the water will be in the larger container when the water is poured from the smaller container into the larger container. They indicate their estimation by placing an elastic band or drawing a line with a marker at the level they estimate. Then they test this out.

### Day 1

#### What you need

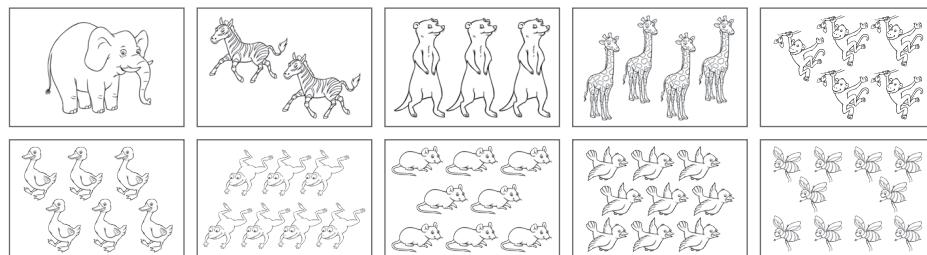

- Story: *Animals' race* (page 198)
- Number frieze symbol and picture cards 1–10
- Pictures of individual number frieze animals (zebra, meerkat, giraffe, monkey, frog, mouse)

1. **Song/rhyme:** Learners sing a song or say a rhyme of their choice.
2. **Oral counting:** 0–20 and beyond, 10–0.
3. **Counting objects 1–10:** Learners sit in pairs facing each other. They take turns to count each other's fingernails from 1–10.

#### Guiding questions:

- ★ How many nails do you have on your toes/ears/mouth?
- ★ Which fingernail would you touch if you were counting from zero?

4. **Ordinal numbers first to sixth (story):** Learners sit in a circle. Tell the story, *Animals' race* using the number frieze picture cards (with all the animals on them) for the first part of the story and the pictures of the individual animals for the race.

#### Guiding questions:

- ★ Which animal do you think will come first/last/fourth in the race? Why?

Put the animal cards up as the learners describe who might come first, second, and so on. Change these according to their suggestions and reasoning. Discuss how the different animals move and their size, and whether this would make them faster or slower and affect the order in which they finish.

5. **Ordinal numbers first to sixth (races):** Learners run races outside, six at a time. Six other learners give number symbol cards 1–6 to the learners in the order in which they finished from first to sixth. Repeat with different learners.
6. **Small group activities:** Describe the activities at each workstation.

**TIP**  
Numbers 6–10 will be done in Week 8.

## Workstation 1

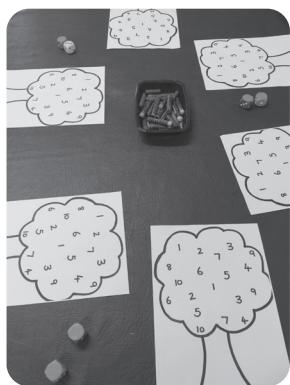

### What you need

- Number book – 1 per learner
- Crayons

Learners write the number symbol 1 and draw one object on the first page, 2 on the second page, and so on, up to 5.

## Workstation 2

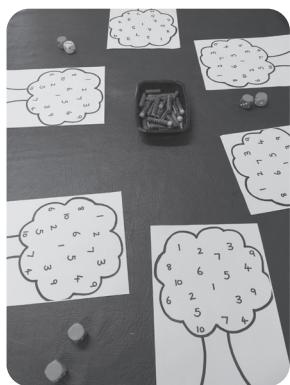

### What you need

- Number symbols 0–10, 1 set per learner (*Resource Kit*)
- A3 strip of paper/cardboard – 1 per learner
- Crayons/pencils

Learners arrange the number symbol cards in order from 0–10 above the strip of paper. Remind them to spread out the number symbols across the top of the paper strip so that there is enough space for them to write the numbers. They write the numbers on the strip of paper below each symbol.

## Workstation 3

### What you need

- An A4 sheet of paper with a tree with numbers 1–10 drawn on it – 1 per learner
- 2 dice per pair of learners (on one dice cover the '5' and '6' with a sticker/paper)

In pairs, learners take turns to throw the two dice. They count the number of dots on the dice. They find the corresponding number on the tree, circle it and then colour it in. Once all the numbers on the tree have been coloured in, learners create a pattern of their choice by writing number symbols around the edge of the page.

## Workstation 4

### What you need

- Block structures in the block area – 1 per learner
- Blocks

Build block structures in the block area or on the mat. Learners copy one structure each and swap until they have copied each structure. They take turns to create structures for each other to copy.

2. **Ho bala ka molomo:** 0–20 le ho feta, 10–0.

**TIP**

Involve all the learners in the counting activity once you have identified what you are counting together.

- Counting objects 1–10:** Learners choose which objects they would like to count.

**Guiding questions:**

- ★ Can you see any group of objects in the classroom that looks like it is a group of 10?

Count the objects together.

- ★ Were there too few/too many/more than 10, and so on?

- Comparing numbers:** Play the game, 'Build and compare'. Learners sit facing a partner. Give each pair of learners a container of Unifix blocks and two number cards. They each take out a card without looking at the number. As they turn over their number cards, together they say, 'One, two, three compare.'

Each learner says his/her number to his/her partner, 'I have a \_\_\_\_\_. They each use Unifix blocks to build a tower to represent their number. They compare their towers and their numbers using the following vocabulary: *more, less, fewer, same* (for example, 'six is more than four').

Learners swap containers with another pair of learners and repeat the activity.

**Guiding questions:**

- ★ Who has a number that is more (bigger, higher)/less (smaller, lower) than their partner's number?
- ★ How many blocks are there in your tower?
- ★ Who has fewer/more blocks in their tower than their partner?
- ★ Who has zero blocks in their tower?
- ★ Who has a number that is the same as someone else's in the class? How do you know?

### Teacher-guided activity

#### What you need

A tub per learner with:  
 • 10 animal counters  
 • Cut-outs of 3 apples

- A ‘fence’ made of a piece of cardboard with the middle cut out
- Scissors
- Structure beads

1. **Word problems using counters:** Learners count their animal counters. Ask word problems about the animals.

**Guiding questions:**

- ★ Sandile has 10 animals. He brings three animals into the shelter for the night. How many more does he need to bring in so that all the animals are inside?

2. **Sharing with a remainder:**

Learners sit in pairs opposite each other. They line up their 10 animals to face themselves.

**Guiding questions:**

- ★ Do you and your partner have an equal number of animals? How do you know?
- ★ Sandile wants your animals to come into his shelter two by two. Show how he could group them.
- ★ And three by three?

4. **Ho ikwetlisa ka 0–10:** Botsa dipotso mabapi le Phoustara ya 3. Baithuti ba ka sebedisa menwana ya bona kapa dibadi ho rarolla mathata ha ho hlokeha.

### TIP

Draw learners' attention to the fact that some things, such as the apple, can be cut to share, but other things, such as the animals, can't be cut to share.

- ★ What do you notice? What can we do about the animal that is left out?

Take time to listen to the learners' suggestions about how they might manage the problem of the remaining animal.

Learners place eight animals in their tubs and take out the cut-outs of three apples.

- ★ How can you share these three apples equally between your two animals?

Learners try to solve the problem. When they realise that there is one apple remaining, discuss how to cut the apple in half to share it equally.

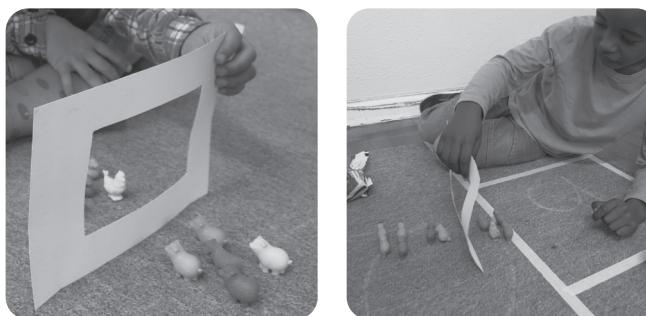

3. **Combinations of 10 using animal counters:** Learners arrange their animals in a vertical line. Using their 'fences', they explore how many different ways they can separate the animals into two groups.

#### Guiding questions:

- ★ Can you place the 'fence' so that there are four animals on one side of the fence?

Learners 'fence off' four animals and count these.

Learners peep through their fences.

- ★ How many animals are on the other side of the fence?
- ★ How many animals are there altogether?

Learners count the animals on the other side of the fence and then repeat the activity with other combinations that make up 10.

- ★ Can you place the fence so that there are exactly the same number of animals on each side?

4. **Combinations of 10 using structure beads:** Ask learners to show five beads. Encourage them to do this without counting in ones. Learners hold five beads and start their count from 5.

Count on from 5 to 8.

Hold four/six/three beads. Count on from 4 to 7/10/8, and so on.
- ★ How many beads do you have now?

## Check that learners are able to:

- solve problems with numbers 0–10
- count on from a given number – up to 10
- share counters equally with a remainder
- identify groups that combine to make 10

## Workstation 1

### What you need

- A4 paper – 1 piece per learner
- Paint in shallow containers
- Sponges/cotton wool/ear buds
- Crayons

Learners fold their pages in half. They write a number between 1 and 5 at the top of one side of the page. They dip sponges/cotton wool/ear buds/their finger into the paint and make the same number of dots as the number they wrote. They fold the page and press it down to make the same number on the opposite side of the page. They count how many dots they have now and then write that number.

## Workstation 2

### What you need

- Playdough and mats
- Number track 0–10 – 1 per learner

Learners mould ‘bricks/blocks’ from playdough and build towers to match the numbers on the number track 0–10.

**Dipotso tse tataisang:**

### Workstation 3

#### What you need

- Number symbols 0–10 (*Resource Kit*) – 8 per pair of learners
- Unifix blocks

Learners work in pairs to play, 'Build and compare'. Each learner has four number symbols in a pile. As they each turn over a number symbol, together they say, 'One, two, three compare.' Each learner says his/her number to his/her partner, 'I have a \_\_\_\_\_. They each use Unifix blocks to build a tower to represent their number. They compare their towers and their numbers using the following vocabulary: *more, less, fewer, same* (for example, 'six is more than four').

They repeat this another three times with different number symbols. They swap their sets of number symbols with other learners and play the game again.

### Workstation 4

**TIP**  
Learners can create their own 'number' picture when they have finished.

#### What you need

- Number books from Week 7
- Kokis/crayons
- A4 paper
- Stapler

Learners complete the pages for 6–10 in their number books. They make envelopes for their books (by folding and stapling A4 pages). They write their names and the number of their home on the front of the envelope.

## Guiding questions:

- ★ How many different types of fruit do you have?
- ★ Do you all have the same number of each fruit? How do you know?

Learners place their fruits above the matching fruit picture on their strips.

- ★ Which fruit do you have the most/fewest of?
- ★ Who has the same number of bananas?
- ★ Which fruit is the biggest and takes up the most space?
- ★ The grapes are bigger than the bananas. What do we need to do when we place these in a line to make sure that we can see which group has the most/fewest?
- ★ What else could we use to show how many of each fruit we have?

Learners make towers from Unifix blocks above the pictures of the fruit to represent their groups of fruit.

Compare and discuss learners' Unifix towers.

4. **Game – representing groups and analysing:** Learners take a handful of fruit from their pile. They sort these and colour in blocks on their grids according to the number of each fruit. The game is over when a learner completes a column.

## Guiding questions:

- ★ How many blocks did you colour yellow for bananas?
- ★ Does anyone have more/fewer blocks coloured for their bananas?
- ★ If you had taken one more banana, how many blocks would you have coloured yellow?

## Check that learners are able to:

- represent data by arranging objects to match illustrations
- represent data by colouring in blocks
- know 'how many' based on data represented
- compare data and answer related questions

## TIP

Add small cards and kokies for learners to write number symbols to add to the containers.

## Workstation 2

### What you need

- 11 containers, for example, yoghurt cups labelled with numbers
- 8 sets of number symbols 0–10 (Resource Kit)

Place the number symbols in a pile on a tray. Learners sort these into the matching containers. They then count to check that each container has eight number symbols.

## Workstation 3

## TIP

Learners can create an additional cookie and decorate it according to their own description of their collection of objects. This can be discussed during snack time.

### What you need

- A poster-sized page divided into 4 labelled blocks
- Scissors – 1 pair per learner
- Magazines
- Glue

Learners cut out pictures of different cars, people, plants and animals and paste them in the appropriate block on the poster.

## Workstation 4

### What you need

- 4 colours of playdough
- Collections of four different types of small objects, for example, shells, twigs, leaves, small stones
- 4 plastic or polystyrene trays

Place all the small objects in a single pile and ask learners to sort them into the four trays. They use playdough to make cupcakes and then choose items from the trays to decorate their cupcakes. Each cupcake should be decorated with items from one of the trays.

## Songs, rhymes and stories

### Week 1

#### **Story: Number 9 story (with Number 9 frieze template)**

Next came nine Birds. They flew in the air for many days looking for just the right kind of home that is safe and warm. They flapped their wings all day long, looking high and looking low for a place they can call home.

At last they find a house that looks nice and cosy. The nine Birds perch on the windowsill and peer inside. There is nobody living in the house!

The Birds use their beaks to gather materials to make the number symbol 9 and the number word nine, which they stick on the front of the door. Each Bird makes one doorbell for the front door.

There is only one bedroom in the house, but luckily birds don't need beds. They like to sleep while sitting up!

Three Birds find a windowsill, three Birds perch on a chair and three Birds sit on the bath. They all fluff out their feathers to make nice warm blankets. They are so tired that there is not even a twitter or a tweet – the nine Birds sleep all through the night and are not up early enough the next day to catch worms for breakfast.

Luckily the nine doorbells ring just as the Birds are feeling hungry. Their friendly neighbours are standing at the front door with nice big, fat, juicy worms to welcome the Birds: one Elephant from house number 1, two Zebras from house number 2, three Meerkats from house number 3, four Giraffes from house number 4, five Monkeys from house number 5, six Ducks from house number 6, seven Frogs from house number 7 and eight Mice from house number 8.

#### **Rhyme: Two little chickens**

Two little chickens looking for some more  
Along came another two and they make four  
Run to the haystack, run to the pen  
Run little chickens, back to mother hen.  
  
Four little chickens getting in a fix  
Along came another two and they make six  
Run to the haystack, run to the pen  
Run little chickens, back to mother hen.  
  
Six little chickens perching on a gate  
Along came another two and they make eight  
Run to the haystack, run to the pen  
Run little chickens, back to mother hen.  
  
Eight little chickens run to mother hen  
Along came another two and they make ten  
Run to the haystack, run to the pen  
Run little chickens, back to mother hen.

#### **Song: The ants go marching two by two**

The ants go marching two by two.  
Hoorah! Hoorah!  
The ants go marching two by two.  
Hoorah! Hoorah!  
The ants go marching two by two;  
The little one stops to tie his shoe,  
And they all go marching down  
To get out of the rain.  
Boom, boom, boom, boom!

## Week 2

### Story: Number 10 story (with Number 10 frieze template)

Ten Bees have been buzzing around all day drinking the juice – called nectar – from the beautiful flowers around the neighbourhood. Whenever one Bee finds a flower with juicy nectar, it does a little dance to tell the other Bees that there is food nearby.

The Bees need to find a home soon so that they can make honey from the nectar they have collected. They look at the last house in the row and decide it will make a perfect beehive – this is what bees call their homes.

Bees are very hard workers and they do their jobs well, so they set to work buzzing about to fix their beehive and make it cosy. They make their front door out of twigs from trees. The number symbol 10 and the number word ten goes on the front of the door with 10 doorbells. The Bees make curtains for their windows out of green leaves, they make candles from beeswax and they make honey for the dark nights. The queen Bee rests in the hive while the other nine worker Bees turn the nectar they have collected into honey and pour it into nine honeypots. Early the next morning all ten Bees put on their stripy yellow and black jerseys and their black boots and deliver one honeypot to each of their new neighbours: the one Elephant from house number 1, two Zebras from house number 2, three Meerkats from house number 3, four Giraffes from house number 4, five Monkeys from house number 5, six Ducks from house number 6, seven Frogs from house number 7, eight Mice from house number 8 and nine Birds from house number 9.

### Song: Ten little honey bees

Ten little honey bees buzzing around  
One went to the hive  
One to a flower  
How many honey bees buzzing around?  
Eight little honey bees are left now.  
Eight little honey bees buzzing around  
One went to the hive  
One to a flower  
How many honey bees buzzing around?  
Six little honey bees are left now.  
Six little honey bees buzzing around  
One went to the hive  
One to a flower  
How many honey bees buzzing around?  
Four little honey bees are left now.  
Four little honey bees buzzing around  
One went to the hive  
One to a flower  
How many honey bees buzzing around?  
Two little honey bees are left now.  
Two little honey bees buzzing around  
One went to the hive  
One to a flower  
How many honey bees buzzing around?  
No more honey bees are left now.

## **Story: The beehives**

Every day the ten Bees left their beehive and went buzzing around looking for flowers. One day they flew a little further into the forest where the trees were tall. They could hear the buzzing sounds of other bees and as they flew closer they could see many beehives hanging from the trees. They saw lots and lots of bees going in and out of each beehive. There were too many bees to count.

Let's pretend the counters are the bees and your lids are the beehives.

### **Song: Ten green bottles**

Ten green bottles hanging on the wall  
Ten green bottles hanging on the wall  
And if one green bottle should accidentally fall  
There'll be nine green bottles hanging on the wall.

(Repeat for nine, eight, seven, six, five, four, three, two)

One green bottle hanging on the wall  
One green bottle hanging on the wall  
And if one green bottle should accidentally fall  
There'll be no green bottles hanging there at all.

### **Story: Number 0 story (with Number 0 frieze template)**

All the animals now lived happily side by side in their own houses. They went out of their way to be friendly and helpful to one another.

One day as Elephant looked out of his window he saw a machine digging a hole in the ground next door to him. Over the next days and weeks all the animals watched as a new house was built right before their very own eyes. Cement was mixed, bricks were laid, a roof was built and the doors and windows were fitted. Finally the house was ready. It was a beautiful house, strong and well built.

'Who will live in this splendid new house?' the animals wondered. They all gathered outside the door of the house, excited to meet their new neighbours. There was no doorbell on the door, but the four Giraffes saw that the door was open and they curled their long necks through the door. 'Anyone home?' they called. No one was home.

The animals all crowded inside. The house was empty. The Birds flew from room to room, but there was no furniture – no bed, no table and no chairs. There was nothing ... zero.

To this day, nobody has moved into the new house. It has stayed empty with nothing inside it. The animals call it the zero house because this is the word that means 'nothing'.

## **Story: The Elephant's bath**

### **Part 1**

One day Elephant left his house to go down to the river. ‘Hey, Elephant,’ said his neighbours, the Monkeys, ‘where are you going?’

Elephant replied, ‘I am going for a walk to look for a place to take a bath.’

‘Hmmm,’ said the Monkeys. ‘That’s a long way to go. We have a bathtub. Why don’t you have a bath at our house?’

### **Part 2**

Elephant explained that he would make his way down to the river to take his bath. He stopped in front of the Giraffes’ house. ‘Hey, Elephant,’ said the Giraffes, ‘why are you carrying a bucket?’

Elephant replied, ‘I carry a bucket with me so that when I go to the river I can fill it up and have nice refreshing water to drink.’

As he got closer to the river, a little boy ran past Elephant and down to the river where he filled up a jug and some cups with water.

As the little boy raced past, he told Elephant that there was a fire at the campsite.

Elephant stuck his trunk into the river, filled his bucket with water from the river and followed the little boy to the fire. Elephant and the little boy emptied the water onto the fire to put it out.

### **Part 3**

It was hot now and Elephant was keen to wallow in the cool water. As he romped and splashed around in the water and trumpeted with excitement he thought about how he could make his own swimming pool to put in his back yard. He had seen some blow-up swimming pools in the shop. He would need to find a very large swimming pool and would need to think about how to fill it.

## **Song: There’s a hole in my bucket**

There’s a hole in my bucket, dear Sindi, dear Sindi  
There’s a hole in my bucket, dear Sindi, a hole.  
Then mend it, dear Vuyo, dear Vuyo, dear Vuyo  
Then mend it, dear Vuyo, dear Vuyo, mend it.

With what shall I mend it, dear Sindi, dear Sindi?  
With what shall I mend it, dear Sindi, with what?  
With straw, dear Vuyo, dear Vuyo, dear Vuyo  
With straw, dear Vuyo, dear Vuyo, with straw.

The straw is too long ...

Then cut it ...

With what shall I cut it? ...

With a knife ...

The knife is too blunt ...

Then sharpen it ...

With what shall I sharpen it? ...

With a stone ...

The stone is too dry ...

With a bucket ...

BUT THERE’S A HOLE IN MY BUCKET!

### Story: *Animals' race*

One day the animals woke up to find dew drops on their window panes. The sky was cloudy and the weather was cool. Elephant blew his trumpet to call the animals together. They knew they should meet in the big field behind their houses when they heard his call. He suggested that they should have a race around the field, down to the river and back. He asked the Ducks to fly up and sit in the trees to check that the runners kept to the track and the Birds and Bees to fly above the runners to see that they were safe during the race.

There wasn't a lot of space on the track so there could only be six runners in the race. There was a lot of excitement as they chose which one of the Zebras, Meerkats, Giraffes, Monkeys, Frogs and Mice would run in the race.

Eventually when the runners had been chosen, the six animals lined up. Then Elephant blew his trumpet and they took off.

### Shape song: A circle's like a ball

(To the tune of *The farmer's in the dell*)  
A circle's like a ball,  
A circle's like a ball,  
Round and round,  
It never stops.  
A circle's like a ball!  
A square is like a box,  
A square is like a box,  
It has four sides,  
They are the same.  
A square is like a box!  
A triangle has three sides,  
A triangle has three sides,  
Up the mountain,  
Down, and back.  
A triangle has three sides!  
A rectangle has four sides,  
A rectangle has four sides,  
Two are long, and  
Two are short.  
A rectangle has four sides!

## Song: Shape Hokey Pokey

You put your circle in,

That's what it's all about!  
You put your rectangle in ...  
You put your square in ...  
You put your triangle in ...
